# Food, Preparation & Nutrition Knowledge Organiser – Special diets

#### Factors that affect food choice:

**Vegetarians** do not eat meat but eat both dairy products and eggs. They also eat vegetables, grains and pulses.

**Vegans** do not eat meat, eggs or dairy. They do not consume anything from an animal. Vegans eat vegetables, grains and pulses.

**Pescitarians** do not eat land mammals but do eat vegetables, dairy, eggs and fish. They also eat grains and pulses.

**Meat eaters** (Carnivores) eat land animals, fish, eggs and dairy, as well as vegetables.

#### Environmental and ethical factors.

- Fair trade food production aims to provide fair prices and better working conditions for farmers and farm workers.
- Farm assured means that the farms and food companies meet high standards of food safety and hygiene, animal welfare and environmental protection.
- •Food miles means the distance that food travels from where it is grown to where it is bought. This is an environmental concern because of the CO2 emissions from transport.
- Free range is a method of farming where animals are allowed to roam freely.
- •Genetically modified food is grown with genetic manipulation technology. Some people consider this a risk to the environment and choose GM-free products.
- •Organic foods have been grown without the use of chemical fertilisers or pesticides.
- •Seasonal foods means foods that are in season. Choosing these reduces food miles
- •Sustainability is food production that aims to preserve the world's natural resources for future generations.

## Quality control;

Quality control checks will normally include:

- weight checks to make sure the product is the required weight
- •visual checks to make sure it looks the way it should
- temperature checks to make sure it is being kept at an appropriate temperature
- •pH checks to make sure the food has the correct acidity/alkalinity
- microbiological checks to make sure bacteria are not at harmful levels
- •chemical checks to guard against chemical contamination
- metal checks to guard against contamination by metals (usually at the packing stage, using a metal detector)
- •organoleptic checks to check flavour, texture and aroma by sampling the food product.

## Diet types:

Calorie controlled - food energy is measured in calories. Keeping calorie consumption below the energy your body uses up causes weight loss.

Coeliac disease – ( pronounced see-lee-ak ) intolerance to gluten. Gluten is found in foods containing wheat, e.g. bread, cakes, and pasta. Diabetes - is where blood sugar level is higher than normal. Diabetics need to monitor carbohydrate intake.

Lactose intolerance - is an inability to absorb the sugar that naturally occurs in cow's milk.

**Nut allergy** - means sensitivity to nuts, causing a reaction which can be severe.

#### Key terms:

- Cross contamination
- Sensory analysis
- Investigation
- Working characteristics
- Chemical hazard
- Biological hazard
- Physical hazard
- -Chemical properties

## Key words:

- Bacteria
- Hazard
- Appearance
- Taste
- Texture
- Preparation
- Equipment
- Hygiene
- Protein
- Fat
- Carbohydrate
- Vitamin
